

Login and Register Pages that navigate us to whether details :

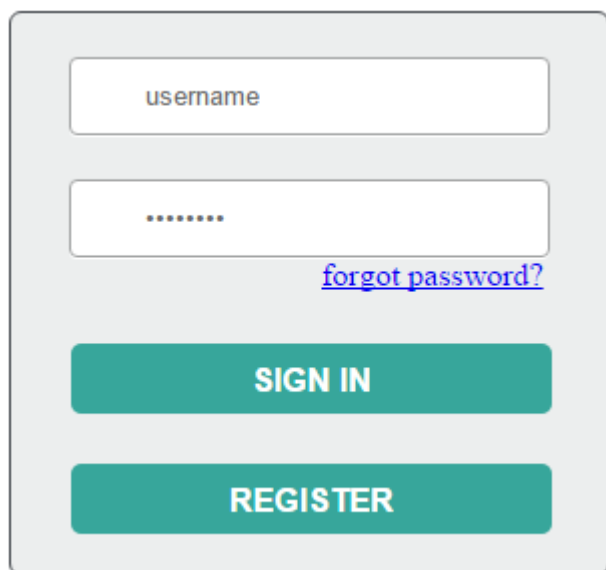

In this assignment, we are going to implement weather details of source and destination locations.

This could be possible by creating LOGIN page and if one does not has been registered, for them a separate SIGNUP page has been created .

This includes three steps :

Step:1

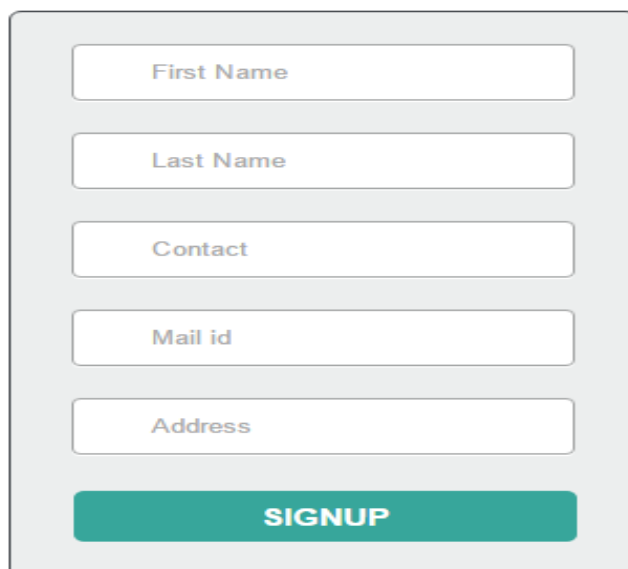

If one has registered , then easily he/she can sign in and get that directly navigates him to the google maps page.

A login form with a light gray background. It contains two input fields: the first is labeled 'username' and the second is a password field with dots. Below the password field is a blue link labeled 'forgot password?'. At the bottom are two teal buttons: 'SIGN IN' and 'REGISTER'.

Step:2

If one doesn't have yet registered , he needs to signup first by clicking on to signup button. After filling all his details, local storage stores all the customer details and then allows him to navigate to google maps and weather details.

A signup form with a light gray background. It contains five input fields: 'First Name', 'Last Name', 'Contact', 'Mail id', and 'Address'. At the bottom is a teal button labeled 'SIGNUP'.

Step:3

Once user goes to maps page, then he has to enter the FROM and To locations for which he wants route map and weather details. Then with in no time he can get all the details whatever he requested.
